Vancouver, Canada

Game developer with 10 years of experience in UE5 and 2+ years of industry experience. Specializes in building scalable Gameplay, UI/UX and AI systems using C++. Awarded Best Programmer and Best Final Project at Vancouver Film School.

Experience

ZeroLock - UE5

PRESENT

- **MVVM HUD Architecture:** Built a fully **MVVM-driven** HUD with stateless widgets bound to **ViewModels**, supporting health, ammo, ability cooldowns, and game timer with multiplayer-safe GameState / PlayerState authority.
- Hero Abilities using GAMEPLAY ABILITY SYSTEM which are close replication of deadlock hero abilities, all networked with cooldown and scalable.
- Item Shop & Inventory UI : Implemented a modular, data-driven shop using CommonActivatableWidgetSwitcher and tiered CommonTileViews, with reusable entry widgets, hover **tooltips**, and inventory UI synced to replicated gameplay state.
- **Character Selector Screen:** Designed an **MVVM-based** selector where UI manages selection state and a dedicated actor handles rendering, including dynamic mesh swaps, animations, and metadata feedback.
- **Automated UI Data Pipeline:** Built an end-to-end pipeline (API → JSON → Python → Editor Tools) to auto-generate Primary Data Assets and populate master and category DataTables, minimizing manual setup.

Spray & Pray - UE5

JUN 2024 - PRESENT

- used **Common UI** to make a player HUD which is fully event driven using delegates.
- Worked on implementing the Menu Screens of the game and settings screen using CommonUI.
- **Custom EQS** Generators and Tests for different types of enemies and allowing designers to change variables to make new behaviors for AI.
- Made **Behavior Tree ,Decorators and Tasks** for all the different types of enemies.
- Working on a **Custom Movement and Pathfinder** for a flying enemy.

Gamitronics - UE4/5

JUN 2022 - OCT 2023

- Made **Construction Tool** which allowed players to place,rotate,scale, change materials of a huge list of assets, it allows users to add and edit different types of light sources and allows the users to save and load scenes locally.
- Worked on a system which took audio input from users and show responses based on key words in it.Using Azure for speech to Text.

FREAK X APPS

SEP 2021 - FEB 2022

- · Prototyped and Implemented Game Mechanisms
- · Optimized code to increase performance and reduce space
- · Tested and Debugged existed game code

Education

- Master of Technology in Software Engineering VIT University - JUL 2017- FEB 2022
- Programming For Web, Mobile & Games. Vancouver Film School – JAN 2024 – DEC 2024
- Advanced Diploma in Business Management. BCIT – JAN 2025 – AUG 2025

Engines

- Unreal Engine 5
- Unity
- Construct 3
